BLISSFUL® HEMP FLOWER Q4 2020

• SOUR SPACE CANDY

Bred by Oregon CBD, Sour Space Candy is a CBD-dominant cultivar that crosses Sour Tsunami with Early Resin Berry. The CBD-heavy Sour Tsunami grows strong and has a flavor profile similar to GG4 and Sour Diesel, while the Early Resin Berry brings even more sour flavors to the mix. Dense buds multicolored, showing purple, orange, and green hues. With Sour Space Candy's enticing terpene profile, this might be your new favorite CBD strain.

• HAWAIIAN HAZE

Hawaiian Haze is a mostly sativa strain that produces some high-quality sativa effects. A mix of Hawaiian and Haze genetics, these light, airy buds will have your head in the clouds. Many users also report that it makes them sociable, relaxed, and talkative. Hawaiian Haze's floral smell and taste of tropical fruit might just have you daydreaming about an island vacation.

• SUVER HAZE

Suver Haze crosses their high-performance Suver #8 and Early Resin Berry. Parent strain Suver #8 grows well in many different climates all over the US, from Oregon to South Carolina, and when crossed with Early Resin Berry, Suver Haze offers notes of black pepper and sweet fruits.

• SOUR LIFTER

Sour Lifter is one of the most anticipated new strains on the market - it is a sativa dominant hybrid that is highest in the cannabinoid CBDA. If you are a fan of the original Lifter, then this is for you. The flavors are loud and proud on this strain - a sweet grape mixed with a heavy diesel twist.

• WHITE CBG

CBG, like CBD, is a non-psychoactive cannabinoid. CBGa is considered the "Mother" cannabinoid that produces ALL other cannabinoid compounds. White CBG is dense with white trichomes that make the buds look like they were rolled in sugar, and features Guaiol, Bisabolol, Caryophyllene, and Humulene as its primary terpenes, giving it a light woody, chamomile profile.
